MongoDB Task

1) Create a new database called Companydb and add a Collection set as Employees.
2) Import Employees_Large.json data to database.
3) Add a new employee to the collection with following data:
   - "name": "Ahmed Ali"
   - "age": 30
   - "department": "IT"
   - "salary": 7000
   - "city": "Cairo"
4) Add 5 employees at once to the collection:
   { "name": "Omar Hassan", "age": 28, "department": "Finance", "salary": 6500, "city": "Alexandria" },
   { "name": "Sara Mohamed", "age": 35, "department": "HR", "salary": 8000, "city": "Giza" },
   { "name": "Hassan Ibrahim", "age": 40, "department": "Sales", "salary": 5000, "city": "Cairo" },
   { "name": "Laila Adel", "age": 29, "department": "Marketing", "salary": 5500, "city": "Cairo" },
   { "name": "Mona Tarek", "age": 32, "department": "IT", "salary": 7500, "city": "Mansoura" }
5) Show all employees in the collection.
6) Get only 5 employees from the collection.
7) Find a specific employee by name.
8) Get all employees working in the IT department.
9) Get all employees whose salaries are greater than 5000.
10) Get all employees working in the "HR" or "Finance" department.
11) Get all employees who live in "Cairo" and do not work in the "IT" department.

12) Get all employees working in "Marketing" and their salaries between 3000 and 7000.

13) Look for employees who are not from the city of "Alexandria".

14) Update all employees in the Sales department and increase their salaries by 10%.

15) Calculate the average salaries for each department.

16) Display the number of employees in each city.

17) Find the top 3 departments by total salaries paid.

18) Classify employees into salary categories and display the number of employees in each category.

19) Create a new copy of Employees that contains only employees with a salary greater than 5000.

20) Add a new sales collection like this:

```
{ "employee_name": "Employee 1", "amount": 500 },
{ "employee_name": "Employee 5", "amount": 300 },
{ "employee_name": "Employee 7", "amount": 700 },
{ "employee_name": "Employee 12", "amount": 400 },
{ "employee_name": "Employee 20", "amount": 200 }
```

Then Calculate the total sales of each employee based on the sales recorded in Collection sales.
